

## BONNEVILLE POWER ADMINISTRATION

# Preemption Process Flow Diagram

Version 0

TBD

This document provides a simplified visual representation of the overall Preemption and ROFR process that is fully detailed by the NAESB Wholesale Electric Quadrant (WEQ) standards in booklet WEQ-001-25. It is intended as a reference to supplement the policies set forth in draft version 4 of the [Preemption of Short-Term Requests and Reservations business practice](#). Refer to the business practice for full details or submit questions to [tblresdesk@bpa.gov](mailto:tblresdesk@bpa.gov).

*The Flow Diagrams included in Section G of the v3 Preemption business practice are being moved out of the business practice into this separate reference document. The Flow Diagrams that are included in v3 are no longer accurate according to the new NAESB v3.2 standards. Moreover, BPA believes that this type of visual reference material is best moved to a separate document rather than a business practice.*

*Because this reference document is not officially part of the business practice, it is not part of the comment and response period. BPA is currently working on this document and will post content as soon as possible. BPA expects to post content before the PCM go-live date and will host a training session at that time to review the content. BPA will of course welcome any feedback on the content of the document once it is posted, but it will not go through an official comment and response process.*
